# Regular Software Updates!

Update your software,  
to close security gaps.

## Protect IT systems

Fend off threats from the Internet,  
before they cause damage.

## Automatic updates

Simply activate updates in the system  
settings.

## Update notifications

Even if pop-ups are annoying: Do not close  
these warnings without noticing them.

## Don't forget to restart

System updates are only installed  
after a restart.

## Computer infected?

A virus scanner detects malware on your  
laptop or smartphone and neutralizes it.
